Biodegrades over 84% within 92 days

ISO 14855-1:2012 tested

5 MIL TRI-POLYMER DISPOSABLE GLOVES

The unique blend of natural rubber and synthetic polymers in BDGplanet™ Tri-Polymer Disposable Gloves add up to a more stretchable, more comfortable and better fitting glove.

Standard nitrile gloves made using 100% petrochemical feedstock and are not easily biodegraded. While there has yet to be a definitive study done, depending on how they are disposed of, nitrile gloves can take decades, even centuries to fully biodegrade.

Tests have shown that BDGplanet™ Tri-Polymer Disposable Gloves biodegrade* over 84% within 92 days, and they can be industrially composted** as well.

In keeping with our sustainability goals, our manufacturing partner locally sources the high quality natural rubber, heats their facilities with 100% renewable energy, and uses 25% recycled water in the production.

*ISO 14855-1:2012 tested.

**Industrial or commercial composting facilities are large-scale operations designed to manage rapid biodegradation of organic materials through the shredding of materials, and optimizing temperatures and conditions to produce viable compost.
